To the EPA,

As a business leader in this community who has worked on sustainable development at Nike, (b) (6) of the City of Portland and Multnomah County Sustainable Development Commission, and CEO of a B Corporation, it is essential for the long term health of our community and local economic growth to make sure the Proposed Cleanup Plan addresses these points:

The draft cleanup plan leaves far too much of the river contaminated for generations to come. At least 1,000 acres of polluted sediment should be removed from the river.

The draft cleanup plan relies too much on "monitored natural recovery," a "do nothing" strategy that leaves pollution in the river in the hopes that it will either be covered over or flushed downstream.

The Cleanup Plan must result in the removal of the Fish Consumption Advisory so that eating fish from the Lower Willamette is just as safe as eating fish from anywhere else in the Willamette River System and this must occur within a 10-20 year time frame.

Creating a toxic waste disposal dump in our river is not acceptable—toxic dredged sediments must be taken to an appropriate landfill.

Entities with liability for the pollution must be held accountable and pay for a comprehensive cleanup that will protect the health of our communities, our environment and our wildlife.

Best regards,

(b) (6)
